exequence is NOT necessarily the nature insert of close PSEDIO. It may be abotter because we only sequence overlapping sections once, or longer because we army of a small overlapping sections once, not shown the proper because we armanged in a sequence of the proper particle of close pSEDIO is at 1962 in this sequence. The true laft end of close pSEDIO is at 1962 in this sequence. The true laft end of close pSEDIO is at 1962 in this sequence. Only program centioner below are predicted from computer analysis, using the program centioner (P. Green, main preparation), and other. The start of this sequence overlaps with the end of sequence overlaps with the entar of sequence overlaps with the start of sequence overlaps with the supposes that the commit PSEDIO has a base deleted but this has not been confirmed experiment of the sequence overlaps.

Recombinant molecule for preparation of male sterile plants - used to produce threas resistant plants and for increase in seed yield Example 12 Fig 5c(1-4): 224pp; English.

A fragment (14865) is provided of microspore specific clone 116, isolated from a Brassion napus genomic library. A 24 kb Bamil fragment Life order, the moding region, was added in antisensem contentiant to Bamil-dispersed Philofo, was vector that has the caw used to transform Bassaica napus. The resulting vector, Philofo, was used to transform Bassaica napus. Plants with did not carry the Ranaycin gene linked to the antisense gene died, while those that remained the antisense gene died. Thus, a constitutive promoter was used to regulate the expression of Pollen-specific to

coll polymerase III holo:enzyme - used to make man-made enzyme of 5 cor of sub:unite, useful for Long chain PCR.

To fail and 10 column 9-12; 65pp; English.

This is the nucleotide sequence encoding the delta subunit of the E. coli DRA polymerase III holosmyme. The sequence was isolated from a lambda place library using probes based on the sequence of the trypic peptides 178072-178072-178073-178073-1808-118 ubunits (theta, chi, pai, delta and delta' (17812)-178015 respectively) are used to make man-made enzymes exemptions of comprising 5 or subunits and potentially for use in long chain PCR.

Sequence 1033 p; 241 A; 372 C; 378 C; 251 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Prevenueled acid which alters flower morphology - by suppressing.

Testals and staments of the converts them to other organs, partic.

Disclosing Canagen 19 into a less assemblished insect peats of the converts them to other organs, partic.

Michorar pecific are proposed as a soldered from the genome of petunia which are pecifical permits as included from the gene has the features of a transcription factor and by bridar in the gene has the features of a transcription factor and convention of the gene part of the floral market in the petula or other in the determination of part of the floral market into petula or in the determination of floral organ primorals and plays a crucial cole in the determination of a brat of the floral market into petula or at stame primorals. Plants transformed with the gene are less a specifically quemper plants are protected against Franklinials of petulation to petulate the method can be used for other, ep.

Sectionally dand/or appointing plants. The plants are also less part characteristic plants. The plants are also less proceptible to secondary fluid may eligible to sec Protection of specific nucleic acid sequences in blood - by
Thom cells caid ratection and method for releasing genomic DNA
From cells caid ratection and method for releasing genomic DNA
From cells caid to the profession of the cells of the profession of the prizer is one of a pair of primars for amplifying WILV-II

or this prizer is one of a pair of primars for amplifying WILV-II

or all, Proc. Nat. Acad. Soi. (36A, 82:1301-1195 (1965), bases 2989-1128)

or all, Proc. DNA is released from blood cells by exposure to temperatures
assayed using the presence of a particular DNA sequence
con assayed using the POR technique. See 13149-13284 for the 3' primer and
miny II specific probes See also 012147-012364 for the 3' primer and
second for detection of other witness of sequence
of sequence 12 BP, 6 AP, 8 C, 3 G, 4 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PRESULT 54

other 8 creat an ShoI site 5' to the start codon. Primer 2 is complementary to an internal part of the coding region, contg. if \$111 site which is present in the gene itself. These 2 primers permit the amplification of a 335 base fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC sequence provides high detection sensitivity and specificity. The CC probe may be optionally labelled with biotin and used in methods to CC quantitate the amount of DWA in a sample. See 9(25312-51. SO Sequence 40 MP; 12 A; 7 C; 7 G; 14 T;

This primer is used to synthesise the 1' end of the human Col III gene
by PRR amplification. This is used in the construction of recombinant
converse contact of the contraction of recombinant
contraction of recombinant
contraction of recombinant
contraction of recombinant
contraction polypects compresses culturating a hast cell where the bost
contraction inferent intansfered or transfered with a first
contraction inferent intansfered or transfered with a first
contraction inferent intansfered or transfered with a first
contraction which encodes a (pro)collagen submit and a second
contraction which encodes a (pro)collagen polypecticle having a nuclaic
contraction which encodes a (pro)collagen polypecticle is elected from
from the culturate cell. The (pro)collagen polypecticle is elected from
contraction or contraction of contraction of
contraction of contraction of contraction of contraction of contraction of contraction of contraction of contraction of contraction of contraction of procollagens and collagens.

Sequence of procollagens and collagens inflication of the
contraction of procollagens and collagens cultification of the
collagens in the contraction of contraction 888888888888888888888

ID 062541 standard; DNA: 80 BP.
AC 062541.
DT 0625541 of (first entry)
DT 0625541 observable for repeated sequence of D1781 locus.
DT 0625562 observable for repeated sequence of D1781 locus.
RM Probes detection; repeat sequence; D1781, locus; control region;
RM Probes detection; repeat sequence; bluman alpha satellite locus; mitochondria; ss
SS Symbetic.

Oligoruncicotide probes for detecting human DNA - having
sequences complementary to a human alpha atallite locus or a
conserved sequence in the mitochondrial genome
Claim 5; Page 18, 75p; Engilsh.
This oligonucleotide probe is complementary to a region in the 2.7
Milohase DI73 locus, a highly repetite sequence. The use of probes complementary to a highly repetited sequence or to a conserved
sequence pravides high detection sensitivity and specificity of sequence protionally labelled with biotin and used in methods to
quantitate the amount of DNA in a sample. See Q6532-51.

An explainment of the control of the

Canalisations
Carlo Asingle-stranded DNA (or its complementary strand or the corresp.
A single-stranded DNA) which comprises one of the 7837 'Gs' sequences
cubble-stranded DNA, which comprises one of the 7837 'Gs' sequences
cc given in T1900-176837 and which is able to hypitalise to part of
chuman genomic DNA, cDNA or BNA is claimed. The Gs (Gene Signature)
cc sequences were obtained from 3 'directed cDNA libraries prepared
from various human tissues; synthesis of cDNA was initiated from the
cc from various human tissues; synthesis of cDNA was initiated from the
currenalized corpus syptidies with specific mRNA species, since
the 3'-oriented cDNAs hypitidies with specific mRNAs and
is constructed on as to reflect accurately the relative abundance
cd different mRNAs in the particular training a corpus and services
confidence on an oriented constant of the special corpus
confidence on an oriented constant of the corpus of the corpus of a given GS in a cDNA library can be
comparable of the corpus of RESULT 68 standard; CDNA to mRNA; 110 BP. M. D. 773268; standard; CDNA to mRNA; 110 BP. M. D. 77407-1985 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Tue Nov 17 08:55:26 1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ů mis acquence represents the CDNs encoding bories epithalial lingual unitationability parties (LAP). LAP is a member of the bacadefaming group of the defenable lampy of periods a member of the defenable matinistrability activity sequence forms positive and Gram negative bacterist, and fungal happognist LAP is present at Low leaves in mammalian epithalia, with happogness. LAP is present at Low leaves in septemblar of insight injury/infection. This sequence can be used in a method, additivitying injury/infection. This sequence can be used in a method of identifying nitured in the presence of a test shabetance. The leaves of LAP mann activities in presence of a test shabetance is an up-regulator. The is used to treat microbial infections of the epithalium (or of those that stand to despat issues) e.g. in Laminodeficiant active (ALDS), opsitic forms of the epithalium (or of those that forms of premium of premium) and premium of the spatic defence of the epithalium (or of LADS), opsitic forms of the principle of the spatic active in the control of the control o

CA A single-stranded DNA, Wich comprises one of the 7837 'Gs' sequences to double-stranded DNA, Wich comprises one of the 7837 'Gs' sequences concluded DNA, Wich comprises one of the 7837 'Gs' sequences concluded DNA, CDNA or mRNA, as claimed. The GS (Gene Signature) concluded DNA, CDNA or mRNA, as claimed. The GS (Gene Signature) concluded DNA, CDNA, or mRNA, as claimed. The GS (Gene Signature) concluded DNA, CDNA, which post the CS (Gene Signature) concluded DNA, CDNA, which post the CS (Gene Signature) concluded DNA, CDNA, which separated from the contranal acts of mRNA by using poly(T) as the nole prize. Since the 3'-crimented one is unique to a particular mRNA species, almost contranal acts of the page and the page and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (OKUDA) OKUDO K.

Page 145

CC precursor, or a cloned ds DNA consisting of the ss DNA and its cc complementary so DNA is claimed. Also claimed it as plasmid conte. the ds DNA or its fragment. The motilin may be useful for curing CC gastro-enterophypy at a period of post-operation and for diagnosis. The CC cDNA was preed. from RNA exid. from the upper small intestine. SQ Sequence 555 BP; 155 A; 144 C; 159 G; 97 T;

Nucleic acid encoding Toxoplasma gondii P28 protein - for producing trecombinant protein for vaccination or diagnosis of infection e.g., in ADDS patients
Claim 2; Column 15-15, 10pp; English.
Claim 2; Column 15-15, 10pp; English.
ANN molecule (7689)9 comprises the coding sequence for the P28 antigen (W18315) of Toxoplasma gondii. The sequence was deduced

Due Nov 17 08:55:26 1998

This sequence represents the DNA encoding a transcription controlling
factor of the investion, designated 8:00 The transcription of optional factor in Tree promotes transcription of the RBZI gene. Use of the transcription factor enables free to happened in quality and quantity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of the GX1271 and GX1273 antigens in E. coll. They were designated postal? and grave me designated coordinal entidential entidential antigen fusion proteins. Also neve are lost cells transformed with the vectors and antigent protein. For encoded by the colone gene. He transformed entitle to reach in a vector to immunise birds against with non-cidioned PRI labelling the peptides, they can be used as a type-peptid probe. The Day also be used in an assay to detect Ab squiner the coordinals. The Day also be used to lengthy the specific probe and the sequence 93 pp. 226 A; 203 C; 239 G; 235 T; bond.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 188

The antisense oligonuclectide given in 7770; is complementary to
The antisense oligonuclectide given in 7770; is complete sequence of human 15F-1R (whose
complete sequence is given in 073702). Fragments of this entisense
sequence may be used to inhibit the growth of 16F-1R-secreting
enticer cells.

It differs from genomic DRN in R1 isolates of P. falciparum at 3 codons (see n.0733). Planacodum facilitaring memorate antigen combe compared to an affiliative peptide, or adopted or covalantly become consideration. The second consideration is an isolated and the definition of a carrier. It is affiliative, are useful as immunopens in anti-rankla veccines Antibodies directed against it are useful for Sequence 1334 BP: 471 A: 186 C; 229 G; 368 T;

from different subtypes of adenovirus using the primer and probe agreement given in 710.67-90. These primers and probe are used in the decrement of adenovirus. An adenoviral second of a denovirus. An adenoviral second of a denovirus. An adenoviral second of the subtype and subtype specific sequence and the subtype in a subtype specific sequence and it is detected. The primers used for the maintained allows reliable, rapid and easy detection and identification of the subtype of edenovirus. Second and identification Sequence 1503 BP. 308 A. 366 C. 258 G. 314 T.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match 13%; Score 14; DB 19; Length 1263; Best Local Similarity 100;0%; Pred. 02-027-1997 (first entry)
D2-027-1997 (first entry)
EPSPS DRA having sequence altered for increased expression in plants.
S-enclayerustalkinate-1-phosphare synthase; EPSPS Glass II;
Glyphosate resistant; transgenic plant; harbicide; shikhaic acid; fision protein; soybean; corn; wheat; barkey; cotton; sugarbeet; photoco; ds.

CD The sequence is that of a synthetic class II S'-enolpyruvjshilkhate-3 composible synthase engue (EPSPS) gene. It can be used to create those phase annuals or seeds by transforming plant cells. Chese phase an be planted in a field of crops to selectively control composible selected for are e. 9, com, wheat, rice, oliseed cape, rape, those phase and faile. This provides a cost effective, occupate, occupantally competible weed control device.

CG enticonmentally competible weed control device.

CS es also 027744-Q22761.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The mure gene of Streptococous presumoniae encodes unidibe displaying the serving of Streptococous presuments. (087718-32), and yeast WADPH-P450 reductase, either as a fused protein or in cell extracts, and analysing the resulting metabolite to assess the safety of the chemical compound. The method is useful for determining whether the chemical compound, or its metabolite, will be converted into a carcinogenic or mutagenic form through metabolism in the liver. Sequence 1473 BP; 425 A; 313 G; 400 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              P-PODD: verous.

Substant transcriptional regulatory element - for directing expression of gene specifically in cells of endothelial linease of DA of Sequence OSGS, darked from mouse strain CD-1 embryons that is expressed during mouse extrain CD-1 embryon that is expressed during mouse exthiogeness. An additional CDR that is expressed during mouse excliquences; An additional CDR endothers of the DA of Sequence F4000 in USES and encoding procein R4657 was leakaged.
                                              US-08-887-977-9. rrs A ORMA close (178889) codes for the delta subunit (R9739) of the human character (178891) codes for the delta subunit (R97399) of the human Alphocampus of the human character (178991) as probe generated from tat brain orBN using primers (see also 78996-91) based on the rat delta sequence. The CDNA can be chorycoxted into a vector and used to dister expression of the delta subunit in transferred cella, partic, rodent fibroblasts.

Co-transferred host calls capable of expressing the delta, alpha-4, see also 87739) and beta subunits can be used to screen or design sequence 1555 Bp; 298 A; 534 C; 466 G; 278 T;

from a phage lamada-gil mouse embryo cDNA library. DNA of sequence 056699 was inclated from a mouse geometic phage library using tex CDNA as probe, and included the transcriptional regulatory clament of tex compressing the inclusion coden and untranslated sequence. The chament may be used in gene therapy to introduce foreign encounterfalla cells to correct/prevent was ular drassing enems sequence 1590 Bp; 461 A; 377 C; 391 G; 411 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g

Claim 10. Page 51. 87pp: English.
A cDMA clone (731300) codes for novel human G-protein coupled
treeptor CRM1 (19444). It was discovered in a cDMA library derived
from a human bawk embryo. It may also be isolated from the human
breats. CDMA clones for CPM1, GPM2, GPM3 and GPM4 (see also 731300)
65) can be utilized in the produ. of recombinant G-protein coupled
receptors (see also W04454-7) in e.g. E. coll, COS or insect cell
hosts. They can be used to design disposite probes for the
detection of mutations in GPM genes that may lead to tumours and
cancers, or utilized in GPM genes that may lead to tumours and
